While AutoCAD is often considered the de facto CAD system in the commercial world, other CAD systems also exist, including free and open source software such as LibreCAD and sketchUp. AutoCAD itself is a proprietary CAD application, with a user license cost of \$800. What is AutoCAD and its history? AutoCAD was originally developed by a team of software engineers at the Graphics Development Center (GDC) of the Xerox Palo Alto Research Center (PARC). In November 1982, AutoCAD was first introduced to the public as a desktop-based CAD program, originally running on a series of later acquired Xerox Alto computers. It was later released to run on a variety of microcomputers with internal graphics controllers, including the Apple II, Apple IIe and IBM PC/AT. Starting in 1985, Autodesk acquired the intellectual property rights to AutoCAD and its derivatives, and the program has been under continuous development since then. In 1992, the program was made available on the public market as a stand-alone software package called AutoCAD. In 1999, Autodesk started to offer AutoCAD as a cloud-based software-as-a-service (SaaS) offering. The cloud-based AutoCAD model, which was launched in 2013, has been criticized for replacing the proprietary AutoCAD platform with an open source application like LibreCAD. Release history Autodesk developed the first version of AutoCAD in November 1982 for the Xerox Alto minicomputer. The new application came with 16 colors on the display screen. In December of that year, the first version was released. In January 1983, AutoCAD's first mass-produced model, the AutoCAD 350, was launched. The model had 60 additional colors and a much larger display area. A small cartridge was released for the AutoCAD 350 that allowed it to be mounted onto the Apple II. The AutoCAD 350 also featured a new interface that allowed the user to drag and drop objects into the drawing space. In 1983, the first version of AutoCAD for the Apple IIc was released. The new model came with 50 new colors and had a larger display area of 230x128. The Apple IIc was replaced by the Apple IIe as Apple's personal computer with a built-in display screen. In 1984, the Apple IIe CAD system was released with 80 additional

The results of this new study suggest that the mirror neurons system may not be fully functioning in people with autism. Video games and new technology could be key to helping people with autism engage in social skills. In this video, Dr. Tony Attwood, former Chief Executive of Autistica, explains how technology can play a big role in helping people with autism to develop social skills.
