The new Markup import and Markup assist workflows allow for an almost limitless flow of feedback and information throughout your design process. The Markup Import tool copies annotated drawings, images, or even PDFs directly into your drawing, from which you can make modifications. You can also import parts of your drawing from another file and retain the original data. The Markup Assists tool inserts and draws formatted text, variables, and forms directly into your drawing. These tools provide tremendous flexibility and let you work faster and more efficiently, while providing more accurate drawing results. With the Markup Import tool, your annotated information is transferred as soon as it's added to a drawing, so you can change the information as needed, without the need to re-annotate. You can use the Markup Assist tool to easily insert formatted text, variables, and form blocks into your drawings, speeding up your work and eliminating costly overhead. In addition to its new Markup tools, AutoCAD now includes a design review tool in the Markup and Review Tasks that can help you move on to more complicated design features. Design Review: Edit and review your designs before you export them. The Design Review feature gives you the ability to edit and preview your drawings, even while you're in the middle of an export. As you work, you can add annotations to the drawing using the Markup tool. Those annotations will not affect your export. When you're ready to export your drawing, the Design Review tool enables you to review the contents and delete any extraneous, unneeded, or erroneous annotations. It's now easier than ever to change the camera view when creating designs. With a single click, you can quickly switch to a different camera view. Camera view shift is useful for quickly viewing a drawing from multiple angles. Camera view shift also provides an easy way to work with large drawings. To view different sections of the drawing simultaneously, you can flip between different camera views. You can also use camera view shift to navigate to different drawing views or to return to a view from the previous session. When you're ready to export your drawing, simply switch to the next camera view by using camera view shift. Create and edit on the go: Create and edit with confidence.
