Prerequisites and interface Although the interface may seem simple, it can be a little confusing because it consists of three panels. The upper panel shows the input field, where you can paste images or click and drag them from the Explorer or Windows folders. The middle panel displays an enlarged version of the images you chose to compare, with the size and filenames indicating the similarity. The bottom panel shows the comparison results. Comparing images by filename, size and content Each duplicate image's details appear on the screen, along with the file's size and information, such as whether it is an image, a video, audio or a text file. The application does not delete the duplicate files.

Evaluation and conclusion The application uses a drag-and-drop function to allow you to add images from the Explorer or the Windows folder to the input field in the upper panel. It also requires that you paste the images in the same folder where the tool is installed. As for the interface, the program is simple and straightforward, and it runs fast and efficiently.
