**Litecoin (LTC) Price and Market Capitalization** Litecoin (LTC) Price & Market Cap Please note that this site has no affiliation with Litecoin or the Litecoin Foundation. Litecoin (LTC) is a digital currency created by Charlie Lee that is based on Bitcoin's open-source blockchain. LTC can be used for peer-to-peer payments online. Since the crypto market is getting more popular day by day with every passing day, Bitcoin is no more the only currency that has been dominating the crypto market. There are many other alternatives that are also available in the market like Ripple, Ethereum, Litecoin and Bitcoin. Litecoin is one of the most popular cryptocurrencies because of its low transaction fees, faster transactions and user-friendly features. Its Crypto Market Cap is \$17 million Currently, Litecoin is at \$37.53 with a market cap of \$17 million. It is ranked the 14th largest cryptocurrency in the world with a market cap of \$4.6 million. As the market cap is almost equal to the market cap of Ripple, one can say that Litecoin is a close rival of Ripple. Although LTC has a small market cap, but it has been steadily growing over the past few months. The increase in the market cap of Litecoin is due to its high exchange rate in the market. In the past few months, LTC has seen an increase of more than 30%. The price of LTC is high as well, as compared to its market cap. At the time of writing, the LTC price is \$37.53, while the highest it has reached was \$79.27 in
