History The first version of AutoCAD was released in 1991. The first product for AutoCAD was a design program named AIN, which produced interactive floor plans. On December 5, 1991, Autodesk, Inc. released AutoCAD 2.0, which was capable of digitizing and importing 3D objects. This version introduced design tools that could import 3D wireframe, surface, and isometric models. AutoCAD 3D Design was released in 1993, introducing advanced features such as a 3D modeling capability and improved rendering. This version, however, was hampered by high license costs. AutoCAD Architecture was released in 1994, featuring the most advanced 3D modeling tool available. It also introduced a brand new rendering engine, capable of rendering 2D and 3D objects. AutoCAD Civil 3D was released in 1997. It introduced 3D design features, such as object-oriented workflows, advanced rendering, and the ability to import 3D objects. AutoCAD Map 3D was released in 1999, featuring AutoCAD Raster, a satellite and map-based 3D rendering engine. It also introduced the .DWG format and Project Navigator, a flexible file format that replaced the old .DGN format. AutoCAD Map 3D was re-released in 2000, with enhanced interactive features, including a content server that stored all objects in the database. The project navigator also gained many new features. AutoCAD 2010 was released in June 2009, introducing tools to aid in the design of sporting facilities, buildings and landscapes, new user interface elements, enhancements to AutoCAD Map 3D and AutoCAD Civil 3D, and more. This version also introduced the .DWG.vf file format, which was designed to be backwards-compatible with older versions of AutoCAD. AutoCAD LT was released in April 2009 as an improved version of AutoCAD 2000, which included many enhancements to the user interface. It also introduced the new DXF 3.0 and DWG 3.0 file formats, which were designed to better support the creation of 3D models. AutoCAD was redesigned for Windows 7 in January 2012. The new design features include better multitouch support, a new toolbar, ability to use a mouse with a trackball and a Magic Mouse, improved use of multi-core processors, and the a1d647c40b

A comprehensive review on the systemic therapies for advanced bladder cancer: state of the art. Bladder cancer is the most common urologic cancer worldwide. Patients with metastatic bladder cancer are treated with cytotoxic chemotherapy or immunotherapy. Although chemotherapy has been established as standard treatment for muscle-invasive and advanced disease, systemic therapies in patients with metastatic disease are less effective. The standard first-line therapy of advanced disease is based on platinum-based doublet chemotherapy. The standard second-line therapy includes the use of the oral epidermal growth factor receptor (EGFR) tyrosine kinase inhibitors (TKIs) in the treatment of patients with non-selected advanced bladder cancer. In second-line therapy, the intravenous single-agent agent gemcitabine is one of the most commonly used options. In third-line therapy, pemetrexed or docetaxel are the most widely used treatment modalities. However, no improvement in overall survival has been shown for third-line treatment. The response rate to cytotoxic chemotherapy in patients with non-selected advanced disease is generally low, and the duration of response is short. For this reason, there is a great need
