Once you have downloaded the cracked version, you need to disable all security measures on your computer, such as antivirus and firewall protection. After this, you need to open the Office installer, go to the installation directory, and run the installer. After the installation is complete, you need to find the .pst files and copy them to your computer. The .pst files are the password database that Outlook uses. Once the password database is copied to your computer, you need to launch Outlook and find the password database files. Open the files and follow the instructions on how to create a new password.
